## Feeding Directions for SweetPro 16-24

1. Before Feeding *SweetPro 16-24* lick blocks for the first time, animals should be well fed and have access to plenty of clean, fresh water.
2. Have one lick block available for each 30 head of beef cattle.
3. Provide an adequate source of good quality forage at all times (all they can eat).
4. Place lick blocks near areas where animals loaf and at least 30 meters from water.
5. Make lick blocks available in more than one location in large pastures or where more than one water source is available.
6. If animals run out of lick blocks, repeat from Step #1.
7. Provide a fresh, clean supply of water at all times.
8. Other salt and mineral may be provided free choice to balance specific ration requirements.
9. A two week adaptation period will be required to establish a base consumption rate. After adaptation period, consumption will be approximately: 0.25 to 0.5 kgs/day. Monitor cattle and horses intake. If exceeds 0.5 kgs check forage quality.
10. The above feeding directions are general guidelines and will vary with the overall feeding conditions. Always use good management practices and adapt to your specific requirements.

## Caution

1. Contains 600 ppm Copper. **DO NOT FEED TO SHEEP**  
Directions for use must be carefully followed.
2. Do not use in association with another feed containing supplemental selenium.
