Cattle Kandi

Directions for Use

- Before feeding SweetPro® Cattle Kandi lick blocks for the first time, animals should be well fed.
- 2. Provide access for animals to have plenty of clean, fresh water at all times.
- 3. Have one lick block available per 25 head of cattle.
- 4. Provide an adequate source of good quality roughage and forage at all times (all they can consume).
- 5. Place blocks near water sources or areas cattle frequent regularly.
- Make blocks available in more than one location in large pastures or where more than one water source is available.
- 7. If animals run out of lick blocks, repeat from Step#1.
- 8. Other salt and minerals may be provided free choice to balance specific needs.
- 9. A two week adaptation period will be required to establish a base consumption rate.
- After adaptation period, recommended range of intake is 0.34 to 0.56 kgs. per day. Calves .1 to .5 kg/day.
- 10. Once animals consistently consume more than 0.56 kgs/hd/day, transition to SweetPro 16. If daily consumption is consistently below 0.34 kgs/hd/day, transition to SweetPro® Starter.

The above feeding directions are general guidelines and will vary with the overall feeding conditions. Always use good management practices.

Caution!

Contains 600 ppm copper. **DO NOT FEED TO SHEEP!**Do not use in association with another feed containing supplemental selenium.
