Magnum™

SweetPro® Magnum™ blocks are designed for essential fortification of Cow requirements for vitamins A, D & E, plus protein, calcium, phosphorus and trace elements including selenium. Magnum should be used for cattle on below average to poor and harsh forages. Daily intake will vary depending on forage quality and nutritional needs.

Feeding Instructions:

1. Before feeding SweetPro® Magnum lick blocks for the first time, animals should be well fed.
2. Provide access for animals to have plenty of clean, fresh water at all times.
3. Provide an adequate source of good quality roughage and forage at all times (all they can consume).
4. Have one lick block available per 25 head of beef cattle.
5. Place blocks near water sources or areas cattle frequent regularly.
6. Make blocks available in more than one location in large pastures or where more than one water source is available.
7. Other salt and minerals may be provided free choice to balance specific needs.
8. A two week adaptation period will be required to establish a base consumption rate. After adaptation period, recommended range of intake is .75 to 1.25 lbs. per day.
9. Once animals consistently consume less than .75 lbs./hd/day, transition to SweetPro® Super 25.

The above feeding directions are general guidelines and will vary with the overall feeding conditions. Always use good management practices.

CAUTION: USE AS DIRECTED

Contains 600 ppm copper. **DO NOT FEED TO SHEEP!**

Do not use in association with another feed containing supplemental selenium.
